Professional Summary

Aspiring Software Engineer and student at IIIT Allahabad specializing in **high-performance application development** and **Python-based automation**. Expert in engineering full-stack systems using the MERN stack with verified **sub-150ms API latency**. Proven algorithmic proficiency with over **500 problems solved** across platforms, focused on building scalable, secure and production-grade backend architectures.

Education

Indian Institute of Information Technology Allahabad

2024 – Present

B.Tech in Electronics and Communication Engineering

CGPA: 7.8/10 (till 3rd Sem)

Sheiling House School, Kanpur

2024

Intermediate (ISC Board)

Percentage: 86%

Technical Skills

Languages: Python, C++, C, Java, JavaScript (ES6+), TypeScript, HTML, CSS
Frameworks: Node.js, Express.js, React.js, Next.js 15, Tailwind CSS, Framer Motion
Databases/Cloud: MongoDB (Mongoose), PostgreSQL, MySQL, Firebase, Cloudinary
Tools/DevOps: Git, GitHub, Postman, JWT, Bcrypt, Axios, REST APIs, Vercel, Render, VS Code

Personal Projects

Appinto – Full Stack Scalable Health-Tech Platform

[Source](#) — [Live](#)

- **System Architecture:** Engineered a robust MERN backend utilizing **Model-View-Controller (MVC)** architecture to manage high-concurrency appointment scheduling for doctors and patients.
- **Performance Optimization:** Achieved an average API latency of **142ms** through optimized MongoDB indexing and streamlined JSON payload management (avg. **2.1KB**).
- **Security Engineering:** Implemented a secure authentication layer using **stateless JWT** and **Bcrypt** hashing; developed custom authorization middleware to enforce role-based access control (RBAC).
- **Data Management:** Integrated Cloudinary API for optimized cloud-based image storage and implemented asynchronous data fetching using Axios for smooth frontend state transitions.

Next.js Performance Portfolio

[Source](#) — [Live](#)

- **Modern Web Stack:** Developed a high-performance personal platform using **Next.js 15 App Router** and **TypeScript**, achieving a **96/100 Google Lighthouse** score.
- **Optimization:** Reduced **Largest Contentful Paint (LCP)** to **0.8s** by leveraging Server-Side Rendering (SSR), Next/Image optimization, and strategic asset priority loading.
- **GPU Graphics:** Engineered a custom particle interaction system using the **HTML5 Canvas API** and **Framer Motion**, maintaining a consistent **60 FPS** through GPU-accelerated rendering.

Achievements & Competitive Programming

- **Competitive Excellence:** Secured multiple global ranks on CodeChef, including **96** (Div 3), **152** (Div 4), **237** (Div 2) and among 65,000+ total participants.
- **Algorithmic Proficiency:** Successfully solved **500+ complex problems** across LeetCode and CodeChef, demonstrating expertise in **Data Structures** and high-efficiency **C++ implementation**.
- **Performance Engineering:** Consistently applied advanced algorithmic principles to minimize computational overhead, resulting in verified **sub-150ms API response times** in production environments.
- **Full-Stack Versatility:** Engineered and deployed multiple end-to-end applications with **100% Lighthouse Performance** scores and robust **stateless security architectures**.
- **Technical Adaptability:** Proven ability to bridge the gap between low-level system constraints and high-level application scalability, integrating **Python-based automation** to streamline development workflows.
